

Software / Database Development

:: Software Development ::

At ACEIT, we understand the importance of having custom built software, tailored to meet your exact requirements. While off-the shelf software can be useful and will no doubt provide you with basic features, it will not have the detail or unique features that your business requires.

:: Development Tools We Use ::

- Borland Delphi
- Borland Development Studio
- Borland Kylix
- Microsoft Visual Studio.NET

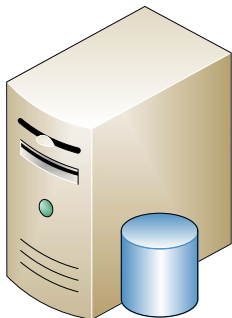

On Microsoft Windows 32/64Bit, .NET and Linux platforms

We work hand in hand with you during the development process, spending the time getting to know your business and how it operates. This gives our software development team a greater understanding of your requirements. We value and encourage your input at all stages, to ensure the finished product meets your expectations.

:: Database Development ::

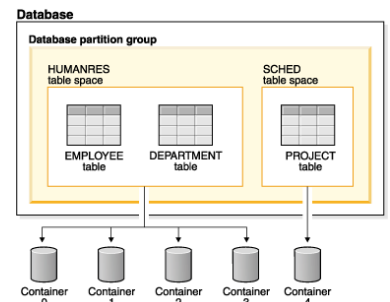

Whether you have an existing database and need a conversion or want a new one from scratch, our database development team have the knowledge and experience to create a database customised to your businesses needs.

:: Databases We Use ::

- Microsoft SQL Server
- Oracle
- MySQL
- Interbase
- Firebird
- Access
- Paradox
- dBase

Our services include setup and implementation of database servers, database software development, database conversion software and custom conversions

We can also develop reports that extract data from your existing backend from some of the most popular databases using report engines such as Crystal Reports, ReportBuilder, Fast Reports and Microsoft SQL Server Reporting Services. We can also develop applications that can merge or synchronise data between two database formats i.e. between your accounting system and online shopping cart.

Working closely with you and your business to discover your exact requirements, we will provide you with the best solution to suit your needs and exceed your expectations.

Before we commence work on any of our development services, we provide you with a detailed quote and PIPP (Project Implementation and Payment Plan). The quote will ensure the price estimate we give you is what you will pay, we are up front with our charges and you will never get stung with unexpected fees and charges at the end.

The PIPP outlines all the necessary terms and conditions for both parties and provides comprehensive information and timelines for the progression of the software to give you the peace of mind that everything will stay on target.
